DETAILED ACTION

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 3 is rejected under 35 U.S.C. 102(b) as being anticipated by Japanese Patent Publication No. 04-285232 to Fukumoto.

Regarding claim 3, Fukumoto discloses a pipe member with a hollow core and a reinforcing plate inserted within (fig. 1). Fukumoto also discloses the steel pipe as having inserting holes (fig. 12: 5), the reinforcing elements placed in an orthogonal orientation with the pipe (figs. 1 & 8) with guiding elements (8c) which have stop members (see side bevel of 8c), the guide member having sloped surfaces (bevel on sides of 8c) that expand to both sides (beveled sides of 8c which meet with main member 8) and pinching joint holes (fig. 6: see pinch of intersecting corners).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese Patent Publication No. 04-285232 to Fukumoto.

Art Unit: 3635

Regarding claim 7, Fukumoto discloses a pipe member with a hollow core and a reinforcing plate inserted within (fig. 1) and welded (abstract). Fukumoto also discloses the steel pipe as having inserting holes (fig. 12: 5), the reinforcing elements placed in an orthogonal orientation with the pipe (figs. 1 & 8) with engaging elements (8c) which have stop members (see side bevel of 8c), the guide member having sloped surfaces (bevel on sides of 8c) that expand to both sides (beveled sides of 8c which meet with main member 8) and pinching joint holes (fig. 6: see pinch of intersecting corners). However Fukumoto does not specifically disclose piercingly forming the outer holes. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Fukumoto by piercing the holes on the pipe, in order to ease assembly and provide for hole locations specified by particular plans. Also, Fukumoto does not specifically disclose a suspending means for the reinforcing element. However, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use a suspending means to hold the reinforcing member prior to insertion, as there must something to push the member into the hole.

Claim Objections

Claim 8 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Allowable Subject Matter

Claims 1, 2 and 4-6 are allowed.

Application/Control Number: 10/665,490

Art Unit: 3635

Page 4

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The cited patents listed on the included form PTO-892 further show the state of the art with respect to steel pipe reinforcements in general.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Basil Katcheves whose telephone number is (703) 306-0232. The examiner can normally be reached on Monday-Friday from 7:30 am to 4:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Carl Friedman, can be reached at (703) 308-0832.
